

PROPOSED DESIGN

The new design has received input from a dozen or more people over the past four years. Numerous changes and suggestions have been incorporated to address specific program needs, to create a multi-purpose space, to become more energy efficient, and to manage costs. These changes would address many of the existing bottlenecks and allow us to access under-utilized space. Although it is not included in the current plan, we have explored making the basement wheelchair accessible. This could be done at a later point by installing a stairlift from the foyer to the expanded entrance in the basement.
